

ABSTRACT

An automated tinting film remover comprises a loading device for moving a vehicle window and locating it at a predetermined position, a securing device with which the properly located vehicle window can be firmly secured, and a removing device for
5 eliminating a tinting film coated on the vehicle window. The removing device comprises a vapor emitting means for weakening the adhesive strength of the tinting film coated on the vehicle window, a cutting means having an electric conductive wire for cutting the tinting film, and a scraping means for peeling off the tinting film, whereby the removal of a tinting film coated on a vehicle window can be conducted in an automated manner
10 with ease.
